

SIGN PETITION TO PROTECT YOUR RIGHT TO ENERGY RESILIENCY!!

Dear Propane Customer,

Californians have been hit hard by both wildfires and electric utility black-outs. These events have reached a catastrophic scale, threatening our safety and livelihood. Both public and private utilities have deployed public safety power shut-offs affecting 2.4 million people. The president of PG&E has advised it will take 10 years to strengthen the electric grid infrastructure. We cannot afford to wait 10 years for reliable power! Despite these threats, some city councils are considering an electric-only solution for residential buildings. It is not only dangerous, but unconscionable to take such action and completely disregard the value of other clean energy solutions like propane.

- Propane is reliable, sustainable and affordable.
- Propane is not subject to blackouts.
- Propane provides power to millions of people.
- Propane provides dependable energy for the elderly and vulnerable populations who power life-sustaining medical equipment.
- Propane provides back-up power for hospitals, water treatment facilities, and electric utilities.
- Propane provides complementary power for solar powered homes.
- Propane is embraced by California Energy Commission for zero net energy building construction.
- Propane is clean today, and continues to innovate with renewable propane that has a carbon footprint on par or lower than electricity.

A single energy source provides a single point for failure. Let your voice be heard!
